General Info Regarding Romania

Romania can be the gateway to Asia and Russia, as all goods can be transported by water (river-sea), road and rail.

Location and Geography of Romania:

With an area of 238,400 square kilometers, Romania is the twelfth largest country in Europe. Situated in the northeastern portion of the Balkan Peninsula, the country is halfway between the equator and the North Pole and equidistant from the westernmost part of Europe—the Atlantic Coast—and the most easterly—the Ural Mountains. Romania has 3,195 kilometers of border. Republic of Moldova lies to the east, Bulgaria lies to the south, and Serbia and Hungary to the west. In the southeast, 245 kilometers of Black Sea coastline provide an important outlet to the Mediterranean Sea and the Atlantic Ocean.

Prior to Union principalities, Romania was divided into many principalities union .Consolidation and union was made in the reign of Karl von Hohenzollern-Sigmaringen. The main principalities were:

- Dobrogea is the easternmost region, extending from the northward course of the Danube to the shores of the Black Sea.
- Moldavia stretches from the Eastern Carpathians to the Prut River on the Moldovan and Ukrainian border.
- Wallachia reaches south from the Transylvanian Alps to the Bulgarian border and is divided by the Olt River into Oltenia on the west and Muntenia on the east. The Danube forms a natural border between Muntenia and Dobrogea.
- The west-central region, known as Transylvania, is delimited by the arc of the Carpathians, which separates it from the Maramureş region in the northwest; by the Crişana area, which borders Hungary in the west; and by the Banat region of the southwest, which adjoins both Hungary and Serbia. It is these areas west of the Carpathians that contain the highest concentrations of the nation's largest ethnic minorities--Hungarians, Germans, and Serbs.

Climate:

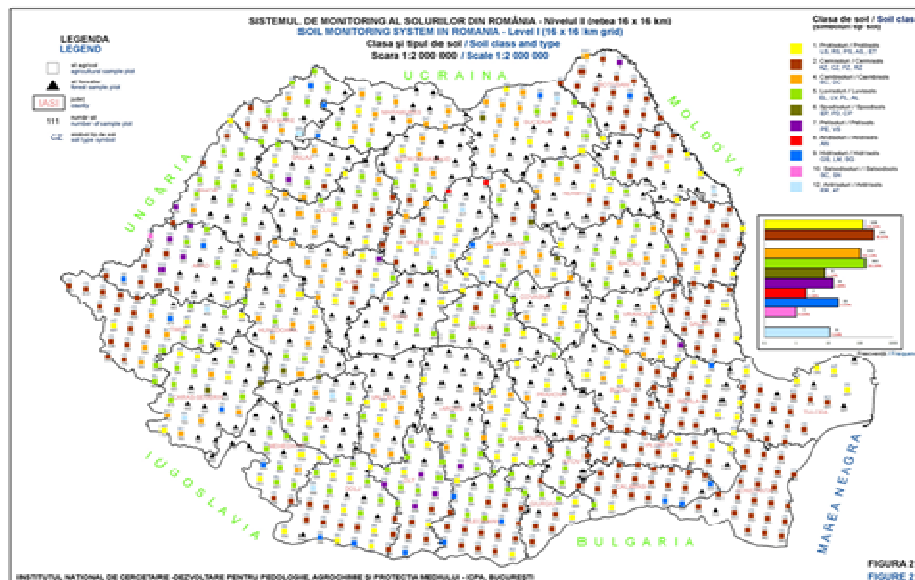

Romania has a climate that is transitional between temperate and continental. Climatic conditions are somewhat modified by the country's varied relief. The Carpathians serve as a barrier to Atlantic air masses, restricting their oceanic influences to the west and center of the country, where they make for milder winters and heavier rainfall. The mountains also block the continental influences of the vast plain to the north in Ukraine, which bring frosty winters and less rain to the south and southeast. In the extreme southeast, Mediterranean influences offer a milder, maritime climate. The average annual temperature is 11 °C (51.8 °F) in the south and 8 °C (46.4 °F) in the north. In Bucharest, the temperature ranges from -29 °C (-20.2 °F) in January to 29 °C (84.2 °F) in July, with average temperatures of -3 °C (26.6 °F) in January and 23 °C (73.4 °F) in July. Rainfall, although adequate throughout the country, decreases from west to east and from mountains to plains. Some mountainous areas receive more than 1,010 mm (39.8 in) of precipitation each year. Annual precipitation averages about 635 mm (25 in) in central Transylvania, 521 mm (20.5 in) at Iaşi in Moldavia, and only 381 mm (15 in) at Constanţa on the Black Sea. Temperate; cold, cloudy winters with frequent snow and fog; sunny summers with frequent showers and thunderstorms. Winters generally are from November to March. The springs are short, occasionally turning right into summer. Summer lasts from May to August. They have a prolonged Autumn, from September to November. The average January temperature is 34 °F (1.1 °C) and the average July temperature is 69 °F (20.6 °C).

Agriculture in Romania

Romania can feed four times its population - over 80 million people from agriculture

Romania has an agricultural capacity of approximately 14,7 million hectares, of which only 10 million are used as arable land. In November 2008, an evaluation revealed that 6.8 million hectares are not used. Agriculture summed up about 6% of GDP in 2007, down from 12.6% in 2004. As of August 2009, approximately 3 million Romanians (close to 30% of the country's workforce) are employed in agriculture, compared to 4-5% in other Western countries. Several major companies have entered the Romanian market, including Smithfield Foods, Cargill, Bunge, Glencore, Lactalis and Meggle. These companies

have since invested hundreds of millions of euro in Romania. According to the National Statistics Institute, in 2006 ,991,000 ha of sun-flower and 191,000 ha of soybean were cultivated. Cereal production in 2006 stood at 15.1 million tons, including 5.3 million tons of wheat and 8.6 million tons of maize. In 2007, a severe drought destroyed over 60% of crops. Wheat production subsequently fell to 3 million tons, and prices fell 25%. In the last 4 years the price for agriculture land hand have a increase/year of ~15%, the trend will continue to rise because each year are coming a large numbers of foreign investor who are willing to invest in Romanian agriculture. The prices for different agriculture land in Romania is very different(i.e average in West part is ~5000-6000 Euro /Ha when in the South is ~2500-3500 Eur/Ha).Addition to this the subsidy in Romania/Ha will continue to increase till 2020 till will reach 200-220 Eur/Ha, also starting from 2014 the new European PAC will enter witch will focus more on the agriculture meaning the open of European Funds since 2014 till 2020(Will receive 19 billion euros in Romanian agriculture 2014-2020).

Agriculture in the West Romania

Timis County is located in the Western part of Romania, bordering Serbia and Hungary. It has a surface of 8.696,7 square km representing 3.65% of the country's total area, being the largest province of Romania. Timis County is composed of 2 major urban areas: Timisoara and Lugoj, 8 towns: Sânnicolau-Mare, Jimbolia, Buzias, Faget, Deta, Ciacova, Recas, Gataia and 89 administrative villages (comune). Timis County is crossed by two European classified roads (E): E 70 - enters Romania from the Serbian border point (Stamora Moravita in Timis County), and makes the connection, through Timisoara, with the South of the country and the capital, Bucharest, and E 671 which crosses Timis County from North to South, assuring in this way a good connection with Hungary and Central Europe.

Hydrographic and soil.

The soil provides favorable conditions for cereal crops, mainly cereals and technical plants and forage for fruit and viticulture. In the northwestern part of the county are chernozem leachates and chernozem, and succeed in the hilly area from west to east silvestre different types of soils, including the brown predominates, the dark-brown and reddish-brown handle smaller areas in the west.

Geo-climatic conditions are generally favorable agricultural activities, but should be considered characteristic aspects of the hydrological conditions of the area.

Thus, there is alternating years of drought and excessively wet, and in terms of the presence of excessive rainfall and groundwater at shallow depths, there is pounding. Due to the low level difference, the flow velocity of the water main emissary - Bega - does not allow natural oxygenation of the river

Soil

Soils in the area of Timis are mainly quality soils for agricultural development. In Timis, the predominant soil types are:

- chernozems cambic - 38.39%;
- gley soils - 21.74%;
- brown soils eumezobasic - 15.45%;
- ponds and borrow pits - 4.60%;
- chernozems (typical gleyed) - 3.8%.

Climate

The climate is moderate continental, with a light Mediterranean. Due to Carpathians Mountains in the east, the county protects against cold continental air and opening westward allow easier penetration of temperate maritime air.

The average annual temperature is between -2 °C and 21 °C. The lowest temperature recorded in Timisoara was of -24.1 °C 5.3 °C in winter and summer, and the highest temperature of 20.5 °C in winter and 39.5 °C in summer

Agriculture

Timis County has a total area of 869 665 ha and holds 3.65% of Romania's territory, occupying by stretch, first in the country

Agricultural area is 702 170 ha (80.7% of the total), of which:

- 531 593 ha of arable land;
- 125 684 ha of natural grasslands;
- 29 497 ha of natural grasslands;
- 4457 ha live;
- 9246 ha of orchards.

The surface is non-agricultural ha 167 495 (19.3%) of which:

- 109 126 ha forests;
- 15 711 ha water;
- 18 685 ha roads and railways;
- 20 635 ha courtyards and buildings;
- 3338 ha of land unproductive.

Project Description Project A27

General Informations

Project Name:	Visag 40ha
Project Number:	A27
Project place:	Visag Village, Victor Vlad Delamarina
Coordinates:	Timis

Site information

Lot size:	40ha
Type of surface:	orchard with fruit trees and pasture
Soil quality:	chernozem, podzolic clay illuviated
Soil type:	3-4 class
Wet meadow (%)	none
One or more lots:	1 area
Hedges or trees on the surface:	with fruit trees: plum, apple,
Inclination:	hilly terrain
Shading:	from the trees
Road access/access facilities:	Asphalt road and earth road
Irrigation availability:	East of 0.3km is a small river
Distance to the nearest river:	~0.3km
Groundwater depth:	<20-30m
Rainfall/year:	530mm/year
Availability of farm buildings:	none
Distance to the next building:	0.1km
The last time it was cultivated/planted:	2012
What was planted/cultivated:	fruit trees: plum, apple
Quantity of made revenue:	unknown
Registered in Land Registry: Title 2 power of attorney.	Lugoj, 2 Parcels in BookLand, 1 Parcels in Property
Operator availability:	private person
Notes: good surface quality.	
Conditions to sale agreement:	3.300€/ha- 3.500€/ha

Other/more information on/about the object

The lands is situated in west Romania, ca. 82km away from town Timisoara, and 23km from Lugoj.
